- 7. KPIs & Performance Metrics
- 8. Process Summary Diagram

9. Approval & Governance

10. Revision History

1. Process Overview

1.1 Process Name

Ticket Support Lifecycle Management Process

1.2 Trigger Event

The process begins when a customer submits a support request through any of the following channels:

- Phone Call
- Walk-in Support
- Email
- Live Chat
- Web Form

1.3 Process End State

The process is completed when:

- The ticket is resolved and officially closed
- The customer confirms the resolution, or an auto-close policy is applied
- Customer Satisfaction (CSAT) feedback is collected

1.4 Objective

To ensure efficient, structured, and SLA-compliant handling of customer issues through ticket logging, assignment, escalation, resolution, quality assurance, and closure processes.

1.5 Scope

In Scope

Out of Scope

Ticket creation and management	Billing dispute handling
--------------------------------	--------------------------

In Scope	Out of Scope
Multi-channel customer support	Product returns processing
Escalation workflow	HR and training management
QA review and monitoring	System infrastructure setup
SLA monitoring and tracking	External system integrations

2. Roles & Responsibilities

Role	Responsibilities
Customer	Submits issues, confirms resolutions, and provides feedback
Support Agent	Creates, manages, updates, and resolves support tickets
Team Lead	Handles escalations and provides advanced troubleshooting support
QA Analyst	Reviews ticket quality and provides performance feedback
Manager	Monitors operational performance and ensures SLA compliance
System	Automates ticket assignment, notifications, and SLA tracking

3. Swimlane Process Flow

3.1 Customer Process Flow

- Submit issue through any support channel
 - Receive ticket resolution notification
 - Confirm or reject the proposed resolution
 - Submit CSAT feedback
-

3.2 Support Agent Process Flow

1. Receive customer interaction

2. Create ticket and capture issue details
3. Ticket is automatically assigned by the system
4. Review ticket information and troubleshoot issue

Decision Point: Can the issue be resolved?

- **Yes** → Resolve ticket and update ticket status
 - **No** → Escalate ticket to Team Lead
-

3.3 Team Lead Process Flow

1. Receive escalated ticket
 2. Review and evaluate the issue
 3. Perform one of the following actions:
 - Reassign to specialist
 - Provide guidance to agent
 - Resolve issue directly
 4. Mark ticket as resolved
-

3.4 System Process Flow

The system performs the following automated activities:

- Auto-assign tickets based on workload and skill set
 - Send notifications for assignment, updates, resolutions, and closures
 - Monitor SLA timers and escalation thresholds
 - Trigger CSAT surveys after ticket closure
-

3.5 QA Analyst Process Flow

- Sample 10% of resolved tickets for quality review
- Evaluate tickets using the QA scorecard

Decision Point: Does the ticket pass QA review?

- **Pass** → Continue with closure process
 - **Fail** → Initiate coaching and corrective action
 - Provide feedback to agents and management
-

3.6 Manager Process Flow

- Review QA failures and escalation reports
 - Initiate coaching or performance improvement actions
 - Monitor operational KPIs and SLA performance
-

4. Decision Gateways

ID	Decision	Yes Path	No Path
D1	Can the agent resolve the issue?	Resolve ticket	Escalate ticket
D2	Team Lead decision required?	Reassign or resolve	Continue process
D3	Did the ticket pass QA review?	Close process	Coaching required
D4	Did the customer accept the resolution?	Close ticket	Reopen ticket

5. Exception Handling

Exception Case	Action
No agent available	Place ticket in queue
Duplicate ticket detected	Merge or link duplicate tickets
SLA breach identified	Escalate to Manager
No customer response within 7 days	Auto-close ticket
Repeated QA failure	Initiate performance improvement plan
Abusive customer behavior	Escalate to Team Lead

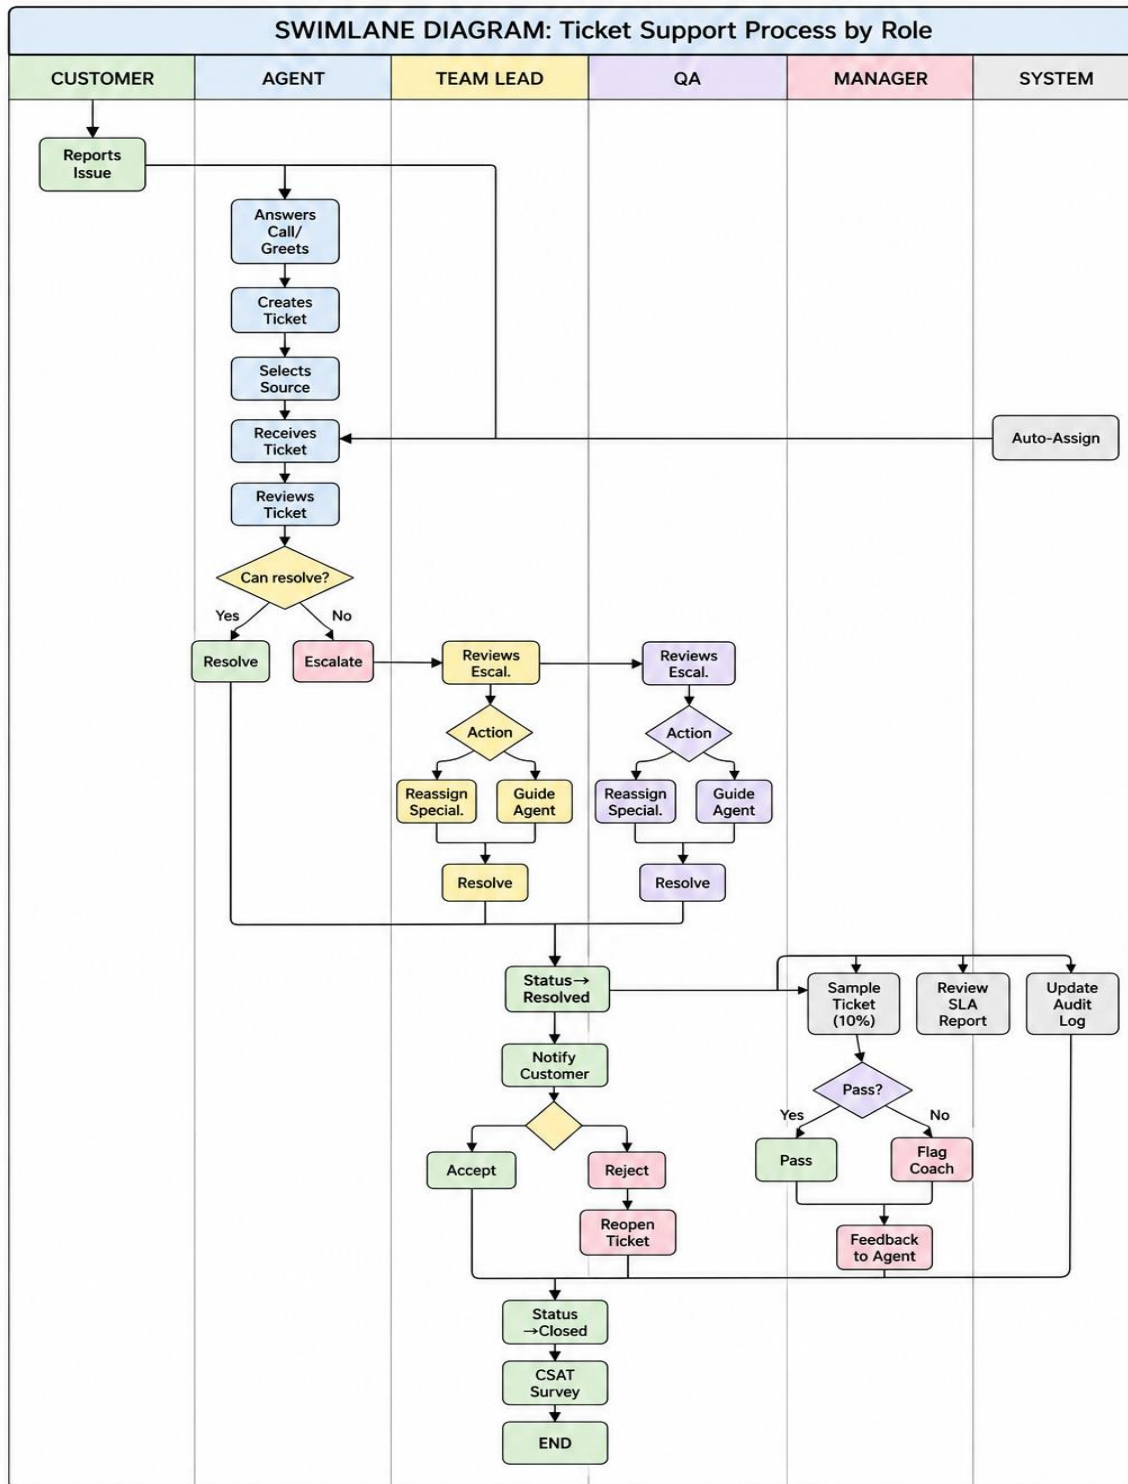

6. Business Rules

- Tickets must be created immediately after customer interaction
 - Ticket assignment shall be automated based on workload and skill matching
 - Priority 1 (P1) tickets must be assigned to senior agents
 - QA sampling rate shall be 10% of resolved tickets
 - Minimum QA passing score is 4.0/5.0
 - Tickets may only be reopened within 7 days after closure
 - CSAT surveys are triggered only after ticket closure
 - SLA monitoring applies to all active tickets
-

7. KPIs & Performance Metrics

KPI	Description	Target
First Response Time	Time taken to provide initial response	< 1 Hour (P1)
Resolution Time	Time taken to fully resolve issue	< 4 Hours (P1)
Escalation Rate	Percentage of escalated tickets	< 25%
QA Pass Rate	Compliance with quality standards	> 80%
Reopen Rate	Percentage of reopened tickets	< 5%
CSAT Score	Customer satisfaction rating	≥ 4.5 / 5
SLA Compliance	On-time ticket resolution rate	> 98%
